

BIESANZ STONE

From the Earth to You

COMMERCIAL PROJECT

OLMSTED MEDICAL CENTER

LOCATION: Rochester, MN

ARCHITECT: HGA

COMPLETED: 2011

This recently completed multi-story medical office building features 14,000-square feet of Biesanz Natural Stone Panels and 2,500-square-feet of handset limestone chosen by the owner. With the projects' timeline going through the late fall and winter, the architect was looking for a product that could easily be installed during the harsh winter months. HGA had used Natural Stone Panels on a previous project and felt the product met the unique needs and challenges this project presented.

A unique advantage Natural Stone Panels provided was the ability for the architect to send approved shop drawings to Biesanz ahead of time so the panels could be created in Biesanz's custom fabrication shop. Biesanz's team of experts handled the design and engineering requirements, and was able to get the panels on site as construction began.
